what happens to a water sample on a macroscopic scale to corresponding molecular-scale changes. After heating the water to boiling, a magnifying glass can be placed at the boundary between liquid and gaseous water. The resulting molecular view shows that while liquid and gas both have free-flowing particles, the particles in the gas are much farther

apart. Gizmo of the Week: Phases of Water | ExploreLearning

Water Cycle Answers Explore the relationship between molecular motion, temperature, and phase changes. Compare the molecular structure of solids, liquids, and gases. Graph temperature changes as ice is melted and water is boiled. Find the effect of altitude on phase changes. The starting temperature, ice volume, altitude, and rate of heating or cooling can be adjusted. Answer Key Phase Changes Sample

answer: Phase changes occur because of the energy of molecular motion. As heat is added to a solid, the molecules break out of their bonds and begin to move freely, causing the solid to melt. As heat is added to a liquid, the molecules move faster and faster until they break free of the liquid and become a gas. 7. Get the Gizmo ready:
